

KRISHNA

Greater Noida, Uttar Pradesh, India | 9873937564 | krishnakumar.tech7@gmail.com | LinkedIn: [krishnakumar](#) | GitHub: [krishnak64](#)

SUMMARY

Software Engineer with a strong foundation in Java, Data Structures & Algorithms, and Object-Oriented Programming, pursuing a B.Tech in Information Technology. Full stack developer experienced in building and deploying MERN stack applications with RESTful API design, authentication, and third-party service integration. Solved 350+ DSA problems and built AI-integrated applications combining backend engineering with LLM APIs and computer vision.

EDUCATION

Bachelor of Technology — Information Technology, IEC College of Engineering & Technology, AKTU, Greater Noida CGPA: 8.1 / 10 (till 6th Sem)	<i>Expected 2027</i>
Class XII, Greno Public School, G B Nagar Percentage: 81.8%	<i>2022 – 2023</i>

TECHNICAL SKILLS

Languages: Java, JavaScript, Python
Frontend: React.js, Redux Toolkit, React Router, HTML5, CSS3, Tailwind CSS, Bootstrap, EJS
Backend: Node.js, Express.js, REST APIs, Socket.IO, JWT, bcrypt
Databases: MongoDB, MongoDB Atlas
Tools: Git, GitHub, Docker, Postman, VS Code, Cloudinary, Redis
AI / Generative AI: OpenRouter API, Groq API, LangChain, LangGraph, RAG, FastAPI, MediaPipe, OpenCV, Vector Databases, Embeddings

EXPERIENCE

Software Engineer Intern, Taskinterns Software	<i>Jun 2026 – Jul 2026</i>
- Developed and delivered a DSA Visualization application, implementing interactive visualizations for data structures and algorithms using React.js and JavaScript. - Independently solved technical challenges, managed project development, and collaborated with cross-functional teams while working closely with the Founder’s Office.	

PROJECTS

MERN AI Website Builder <i>MongoDB, Express.js, React.js, Node.js, OpenRouter API, Monaco Editor, Firebase, Stripe</i>	<i>Live</i>
GitHub: webSiteBuilder	
- Developed a full-stack AI-powered website builder using the MERN stack that generates and edits websites from natural language prompts. - Integrated the OpenRouter API for AI-driven code generation and implemented Monaco Editor for in-browser code editing. - Implemented user authentication and storage with Firebase and built payment processing functionality using Stripe. - Designed RESTful APIs with Express.js and Node.js, structured MongoDB schemas for application data, and deployed the application on Render.	
Real-Time AI Gym Coach <i>Python, OpenCV, MediaPipe, Streamlit, WebRTC, gTTS, Groq API, Pandas</i>	<i>Live</i>
GitHub: AI GYM Coach	
- Built a real-time AI-powered exercise coaching application in Python that processes live webcam video using OpenCV and WebRTC. - Implemented pose detection with MediaPipe to track body landmarks, count exercise repetitions, and analyze workout posture in real time. - Integrated the Groq API for LLM-based coaching feedback and used gTTS to deliver real-time voice guidance during workouts. - Developed an interactive Streamlit interface and used Pandas to structure and track workout session data.	
Vybes — Full-Stack Social Media Platform <i>React.js, Node.js, Express.js, MongoDB, Socket.IO, JWT, Cloudinary</i>	<i>Live</i>
GitHub: Social Media Platform	
- Engineered a production-grade MERN stack social media application featuring Posts, Reels, Stories, Likes, Comments, and a Follow/Unfollow system serving real users. - Architected real-time chat and instant notifications using Socket.IO, enabling low-latency bi-directional communication at scale. - Implemented end-to-end secure authentication using JWT and bcrypt-hashed passwords with protected REST API endpoints. - Boosted backend query performance via MongoDB indexing and managed all media uploads through Cloudinary.	

ACHIEVEMENTS

- Solved 350+ Data Structures and Algorithms problems — LeetCode: krishna_123rt GeeksforGeeks: krishnd33g - Recipient of a merit-based academic scholarship of ₹20,000 and Designed, developed, and deployed 6+ production-grade full-stack web applications
